Professional Summary

Java Backend Engineer with 4+ years of experience developing and supporting banking, fintech, microfinance, identity-verification, and internet-banking systems. Experienced in system design, software architecture, REST and reactive API development, database integration, debugging, testing, reporting, and production support. Contributed to 5+ production-grade platforms across banking, government, and financial-services domains. Skilled in Java, Spring Boot, Spring WebFlux, PostgreSQL R2DBC, Oracle, MySQL, multi-tenant architecture, JasperReports, Docker, and Angular.

Technical Skills

Programming Languages: Java, SQL, JavaScript, TypeScript

Backend & Architecture: Spring Boot, WebFlux, REST APIs, microservices, system design, software architecture

Core Engineering: Object-oriented programming, algorithm design, debugging, clean architecture

Data, Reporting & Testing: PostgreSQL, Oracle, MySQL, R2DBC, JasperReports, JUnit, Mockito

Tools, DevOps & Version Control: Git, GitHub, GitLab, Docker, Jenkins, Kubernetes, Trello

Work Experience

Software Developer

Celloscope Limited | Jan 2025 – Present

- Design and optimize RESTful and reactive Java APIs for banking and financial platforms.
- Work with multi-tenant PostgreSQL R2DBC data access, Oracle, MySQL, and Spring Boot 3.
- Contribute to Agrani Smart Banking workflows, integrations, JasperReports, and production support.
- Apply system design, software architecture, debugging, and performance-focused engineering.
- Collaborate with product, frontend, database, and QA teams to deliver reliable production releases.

Junior Software Developer

Celloscope Limited | Dec 2022 – Dec 2024

- Developed Java services for NRBCB Agent Banking, MRA NID Verification, and microfinance operations.
- Built backend APIs, database workflows, JasperReports, and selected Angular features.
- Applied object-oriented programming and algorithm design to backend workflows.
- Investigated defects, validated data, and supported releases for live financial systems.

Assistant Software Engineer

Millennium Information Solution Limited | May 2022 – Nov 2022

- Performed functional and manual testing for Islamic core banking investment and loan modules.
- Validated banking transactions, business rules, and Sharia-compliance requirements.
- Investigated defects with Oracle and PL/SQL, documented results in Trello, and verified fixes with development teams.

Projects

Banking & Financial Systems:

- Agrani Smart Banking
- Agrani Internet Banking
- Agrani Agent Banking
- NRBCB Agent Banking
- Islamic Core Banking – Investment & Loan Modules

Government, Enterprise & Personal Projects:

- MRA Integrated Management System
- MRA NID Verification System
- AES Crypto WebFlux Service
- Invoice Management Applications – REST API, Angular & Flutter
- Expense Management System
- Java Reactive & Concurrency Labs

Role: Backend Engineering including Requirement Analysis, REST and Reactive API Development, Multi-tenant Architecture, Database Integration, Jasper Reporting, Testing, Deployment Support, Production Support, and Cross-functional Collaboration.

Education

Master of Science in Computer Science & Engineering

Islamic University, Kushtia

Completed | 2025

Master of Science in Entomology

National University

Completed | 2019

Bachelor of Science in Zoology

National University

Completed | 2018

Professional Training

Diploma in Enterprise Systems Analysis & Design – JEE (ESAD-JEE)

IsDB-BISEW IT Scholarship Programme, Dhaka | Dec 2020 – Apr 2022

C# .NET

Digicon Technologies Limited | Sep 2022 – Feb 2023

Key Strengths

- End-to-end backend ownership (Requirement → Design → Development → Testing → Support).
- Java backend development with Spring Boot, Spring WebFlux, and reactive programming.
- Banking and fintech domain expertise across agent banking, internet banking, and core banking.
- Multi-tenant architecture with PostgreSQL R2DBC and Spring Boot 3.
- System design, software architecture, microservices, clean architecture, and system integration.
- Database integration, SQL analysis, data validation, and performance-focused development.
- JasperReports and regulatory reporting for production financial platforms.
- Production support, incident troubleshooting, defect investigation, and release validation.
- Object-oriented programming, algorithm design, debugging, and cross-functional collaboration.
- Applied security, Java concurrency, and reactive-system learning through public projects.
- AI-assisted engineering and agentic workflow learning for developer productivity.
